Subject: Stantec Analysis of Tri-town and the Septage Market

Mile and Stacie,

After reviewing the slides presented by Stantec at Meeting No. 5 in some detail, we have developed some comments and questions that are contained in the attached document. We believe that these issues should be addressed at the next OWQAP Meeting.

Also Stantec was asked at a previous Meeting to obtain the total nitrogen concentrations of the sewage influent to the Chatham plant since the **new plant** began operations. The influent composition should reported as sewage only, that is, before septage is combined with the sewage flow.

Please contact either of us if you have any questions or need further information.

Paul and Ed
